

Association Française de Magnétisme Moléculaire

FRENCH ASSOCIATION OF MOLECULAR MAGNETISM

MISSIONS

Promote molecular magnetism, from molecules to complex assemblies, involving chemists, physicists and engineers

Unite the French teams working on molecular magnetism through dissemination of information and meetings

Raise awareness and train young researchers in molecular magnetism, from synthesis and experimental characterizations to theory and data modelling: specialized schools, continuing education initiatives, PhD awards

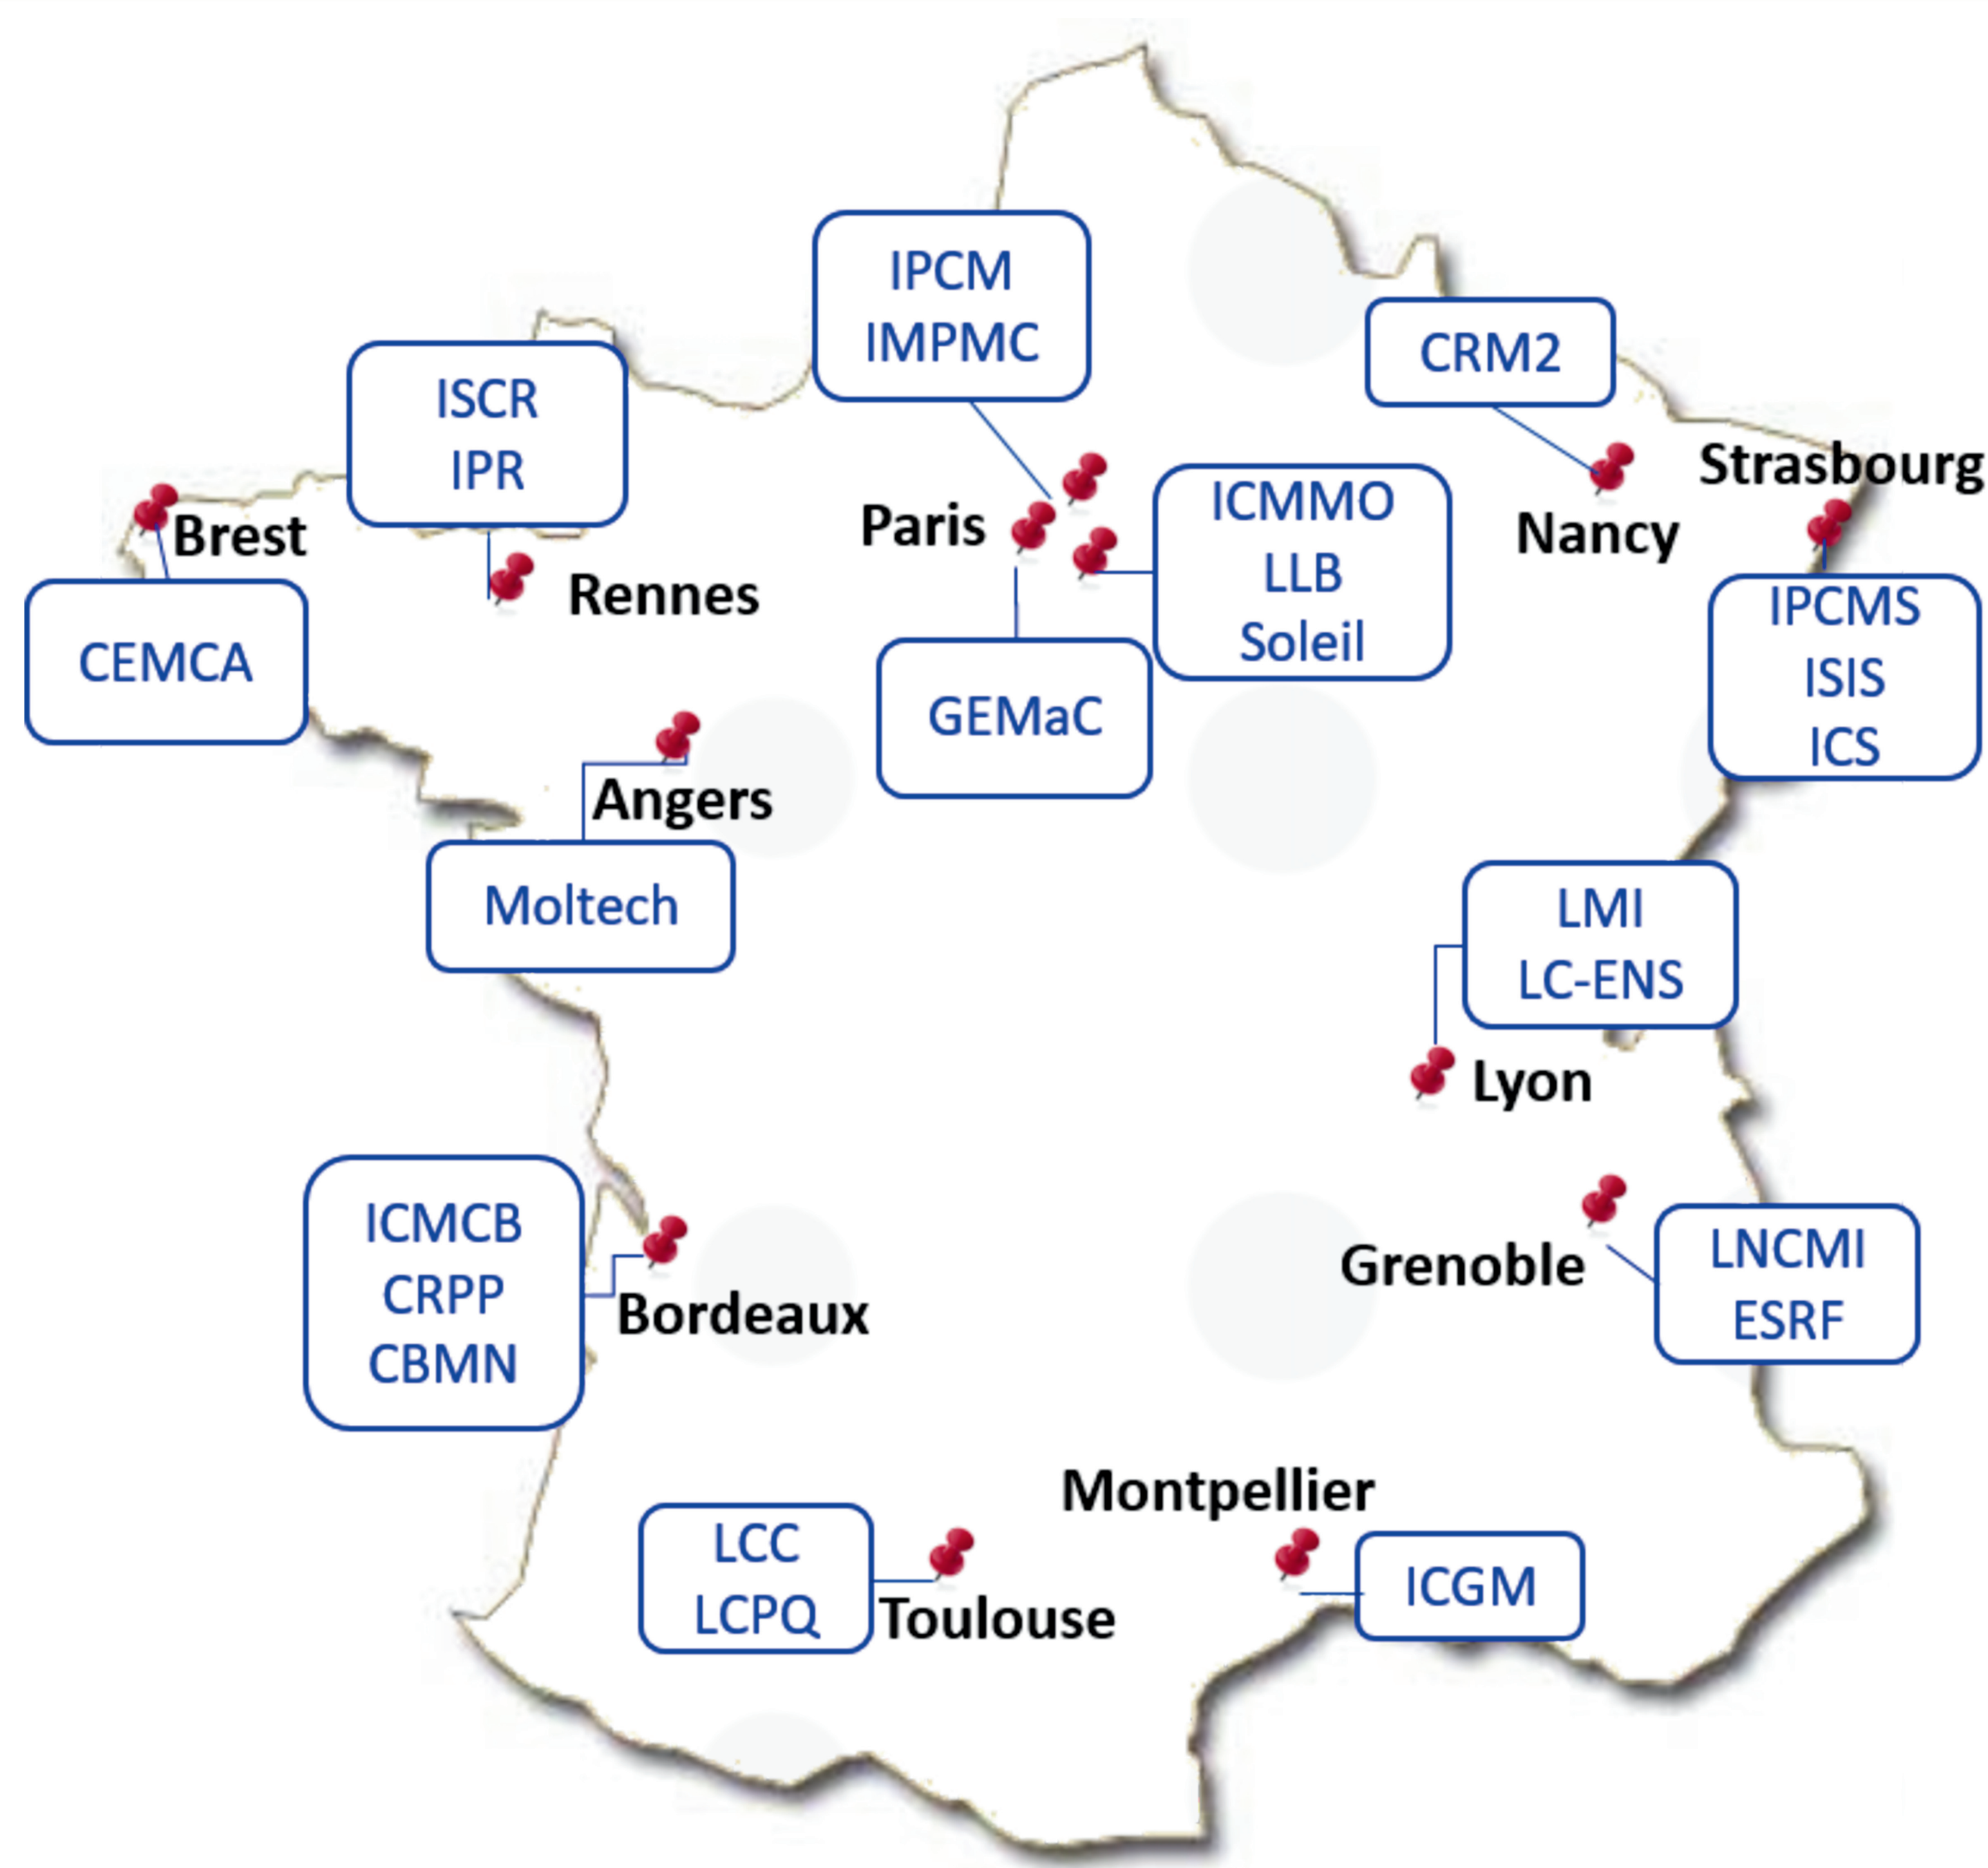

Represent the "MolMag" community at the French, European, and international levels

Stimulate exchanges with other communities and learned societies

HISTORY AND MEMBERS' LABS

Since 2002, the French Molecular Magnetism community has been organised around a succession of national networks (GdR), led by François Varret, Azzedine Bousseksou, Jean-François Létard and Guillaume Chastanet. After almost 20 years, the community decided to establish a long-term organisation to support young researchers and promote collaboration.

The AM² was founded in **2020** by Guillaume Chastanet and Boris Le Guennic, gathering **27 research labs** and around **200 researchers**.

2025-2027 president: Grégory Chaboussant

ACTIVITIES

- Annual meetings focused on young scientists
- A school every two or three years.
- Thematic workshops
- Thematic meetings with other communities
- Funded scientific missions
- Thesis or conference prizes
- Special issues in journals

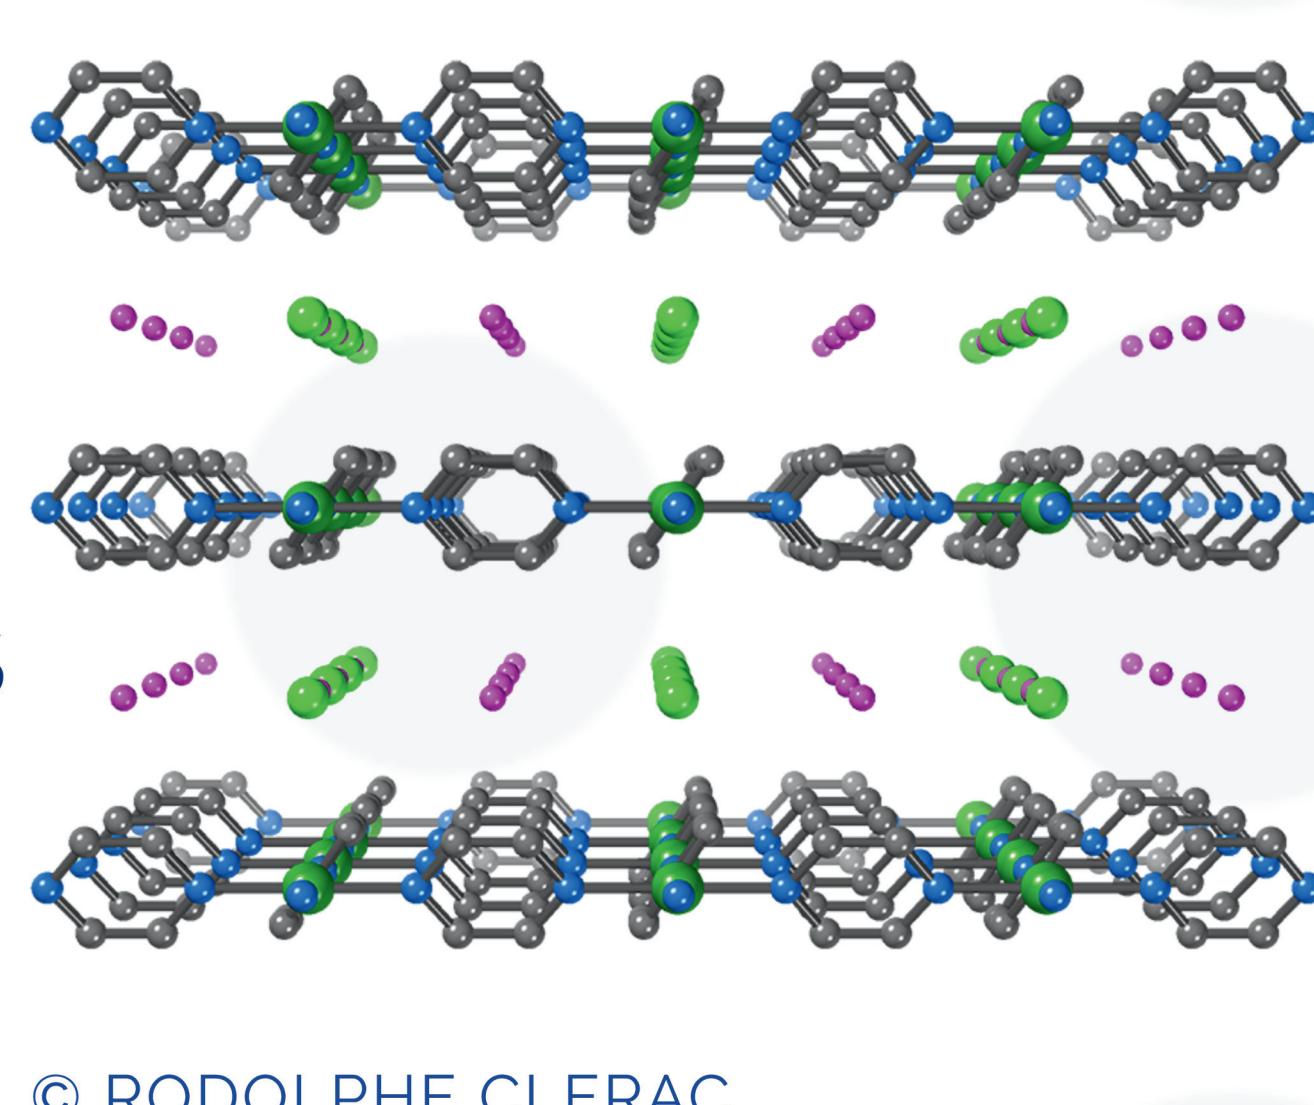

JAMM session 2024

THEMATIC

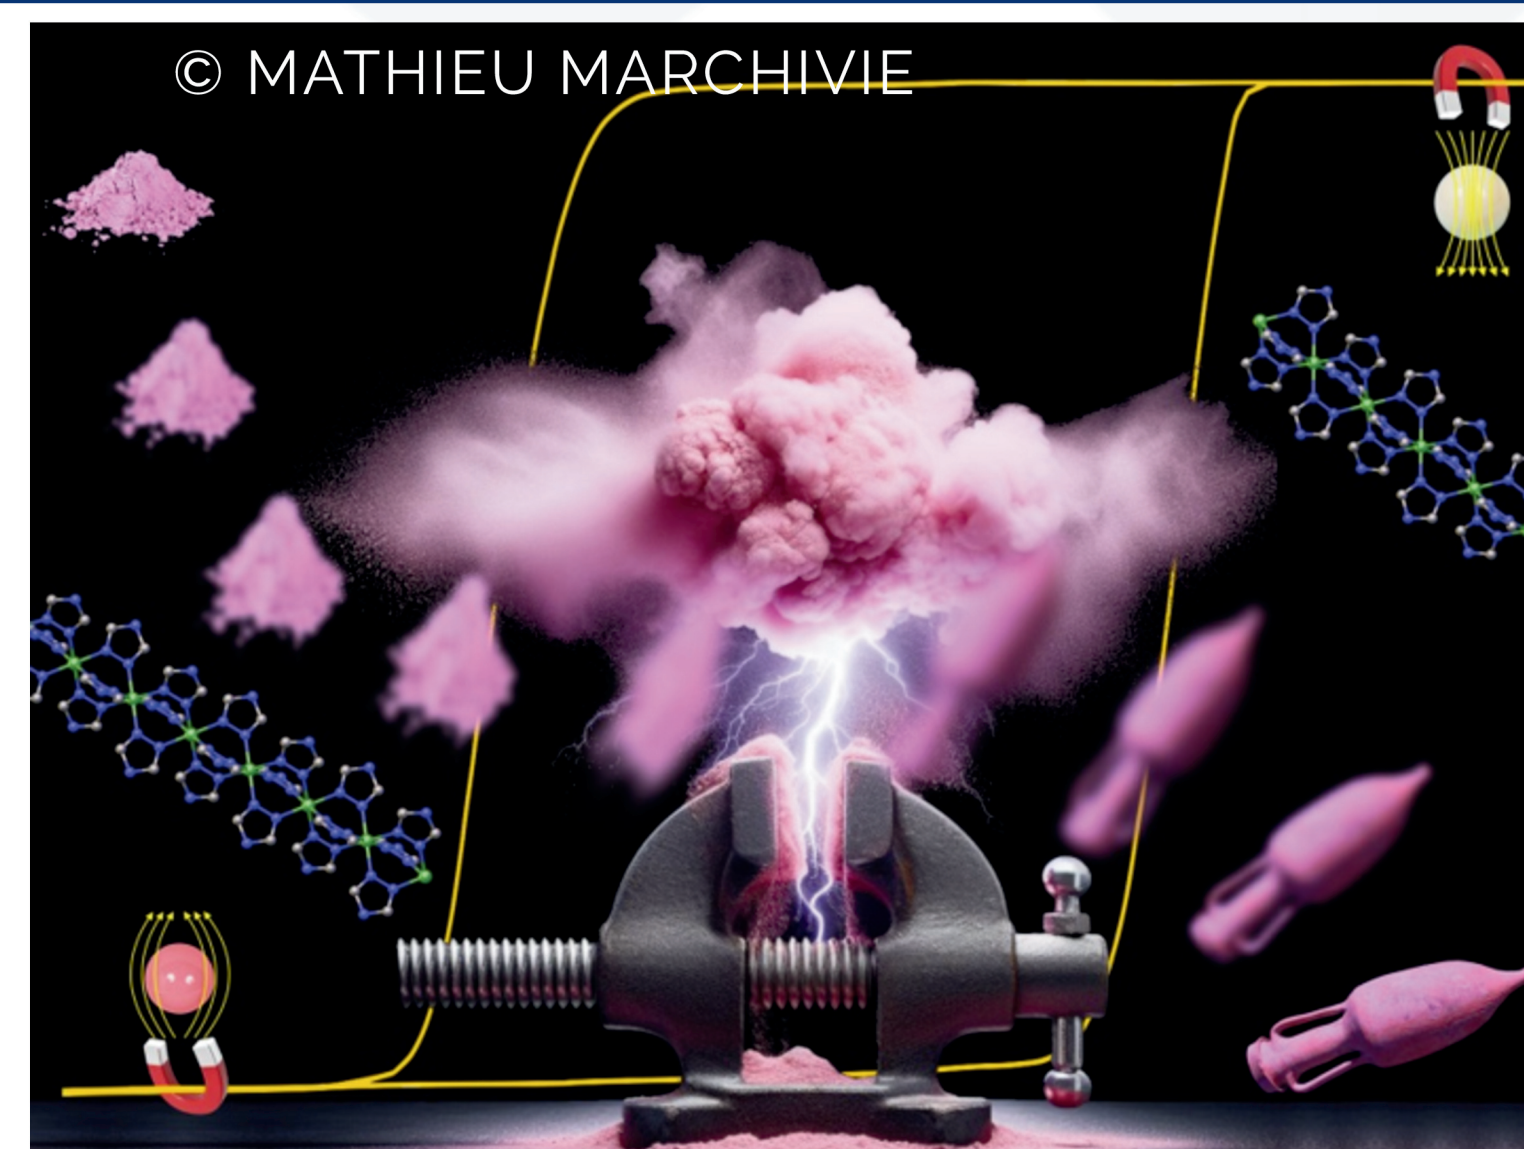

- Molecular engineering
- Shaping of molecular materials
- Multifonctionality and hybrid materials
- Molecular electronic and spintronic
- Multi-scale and multi-constraints instrumentation
- Multi-scale theoretical modelling
